In a typical listening room, the PT-1 transmitter has a maximum range of 50' (15 m). Obstructions such as walls, large pieces of furniture, room dividers, etc. may reduce this range.

**PT-1 Feature Set**
- Selectable 3-position latency switch (*see below*)
- Fast, auto-reconnect upon power outage
- For use with up to 4 Paradigm or Paradigm Reference subwoofers
- Black finish

**Latency Switch**
The back-panel latency switch adjusts the delay between the PT-1’s audio signal input and the subwoofer receiver’s RF output, optimizing the integrity of the wireless transmission and minimizing distortion.

**FMV PRICE**
$99
