BEHIND EVERY GOOD SPEAKER

... lies a good design! While many in-wall/in-ceiling speakers may look good, it's what's behind the speaker that counts! The design and technology ... the stuff you can't see, but if not 'done right' results in a poor-sounding speaker. Behind every PV speaker is a combination of design, technology and engineering that is simply unheard of in this entry-level segment of the market. In fact, PV speakers take our industry-leading Performance and Value to an entirely new level.

“A startling amount of performance ... smooth top end ... rich, natural midrange ... Imaging is astounding ... speakers can be set up and enjoyed in as little as thirty minutes.”
